

DAEWOO**SERVICE MANUAL**

* **AKF-9255**
(without Dolby, AMS)
QUARTZ PLL SYNTHESIZER
CASSETTE RECEIVER

• SPECIFICATIONS

Audio Section

Maximum output power 25 watts per channel into 4 ohms (1 kHz)
Rated output power 16 watts per channel into 4 ohms (1 kHz, 10% total harmonic distortion)
Load impedance 4 ohms
Controls
BASS/TREBLE ± 10 dB at 100Hz/10 kHz

Tape section

Track format 4-track/2-channel system
Tape speed 4.8 cm/sec.
Wow/flutter 0.15% nominal (WRMS)
Signal to noise ratio 50dB

Tuner section

(FM): AKF-9255
Tuning range 87.5 to 107.9 MHz at U.S.A.
87.5 to 108.0 MHz at Europe

Usable sensitivity (30 dB S/N)

Mono 10 dB μ (3.2 μ V/75 ohms)
Signal to noise ratio (at 60 dB μ) 60 dB

(AM): AKF-9255

Tuning range 530 to 1710 KHz at U.S.A.
522 to 1620 KHz at Europe

Usable sensitivity (20 dB S/N) 28 dB μ (31.6 μ /750 ohms)

Signal to noise ratio (at 60 dB μ) 60 dB

General

Power requirements DC 12.0V/Rated; 14.4V
(Usable: 10.8-15.6V)
negative ground

Current consumption 7A Maximum

Dimension (W × H × D) 188 × 58 × 186mm
7 $\frac{3}{8}$ " × 2 $\frac{1}{4}$ " × 7 $\frac{5}{16}$ "
chassis size 182 × 53 × 153 mm
7 $\frac{3}{16}$ " × 2 $\frac{1}{8}$ " × 6"

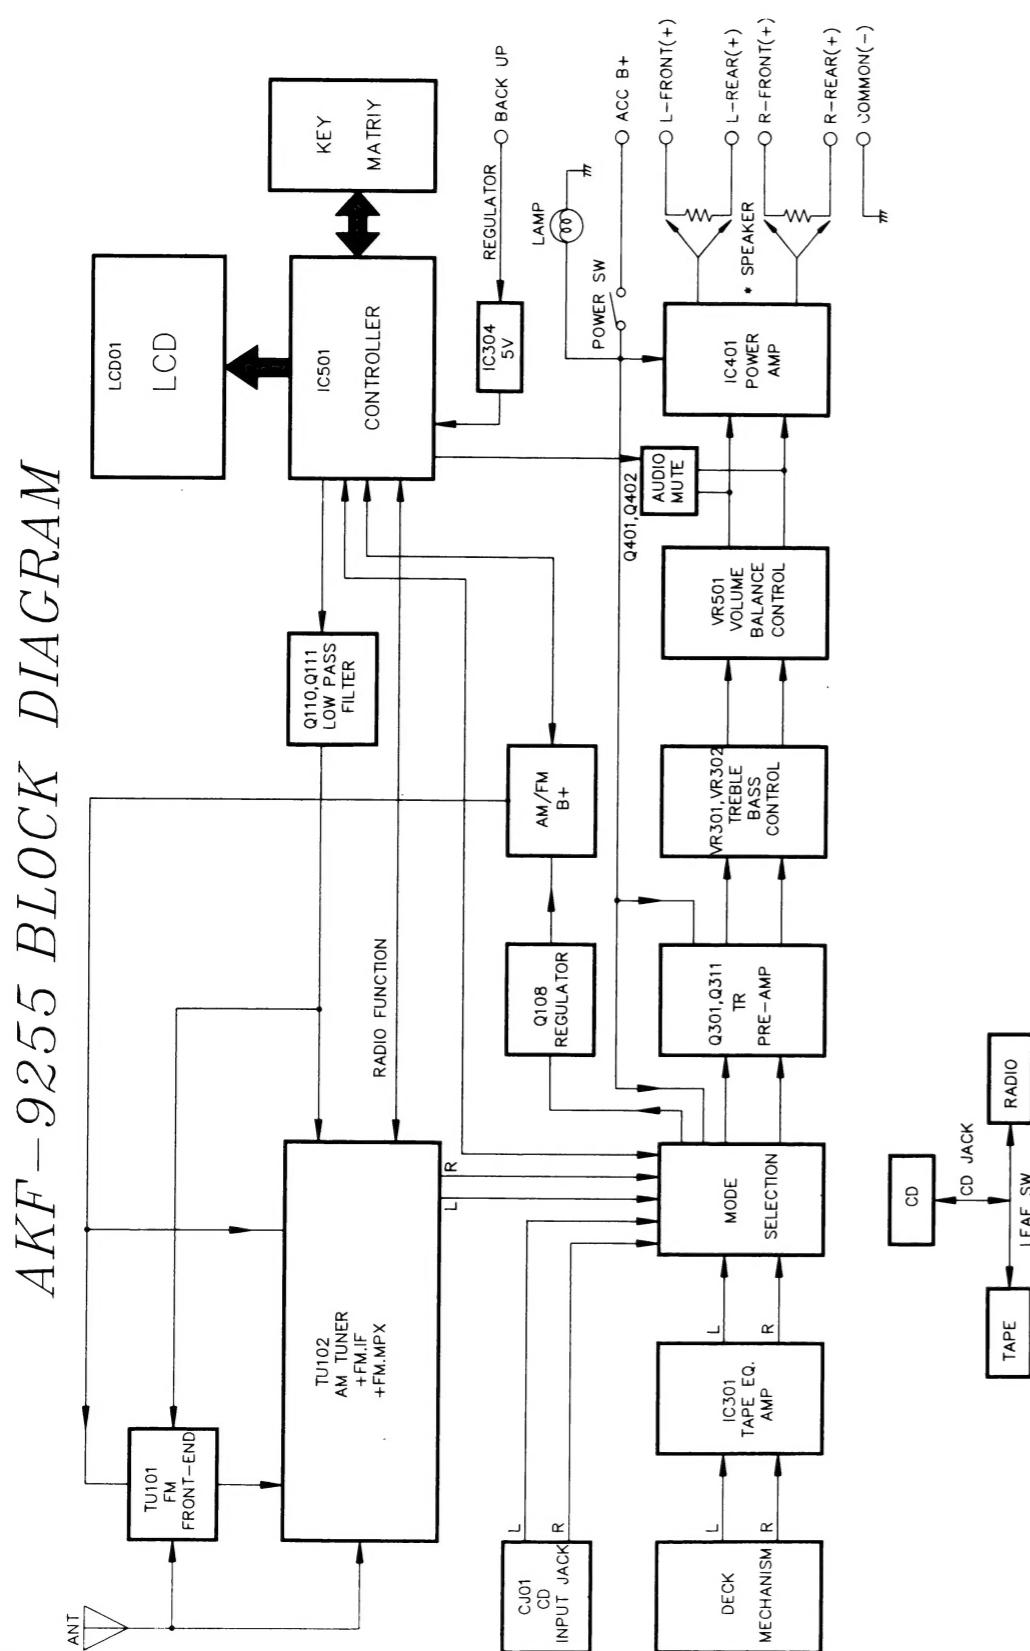

Weight (net) 1.8 Kg

• Design and specifications subject to changes without notice for improvements.

CAUTION

1. Do Not Use Endless Tapes
If an endless tape is used with this unit, the tape will not be wound up properly inside the cassette shell and, as a result, it will not be possible to use it again. Also, this unit cannot eject a tape which has been inserted with its reverse side facing up. (At this case, refer to How to hook out the endless tapes.)
2. Since some capacitors and resistors are omitted from parts lists in this service manual, refer to the Common Parts List for capacitors & resistors.

1. BLOCK DIAGRAM (AKF-9255)

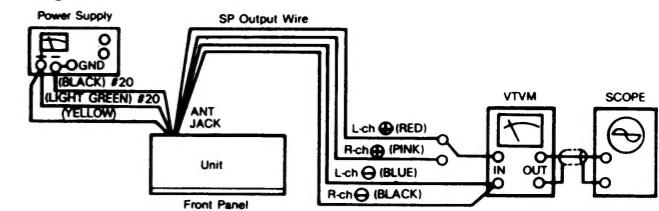

2. ADJUSTMENT

2-1. Tape Adjustment

Note:

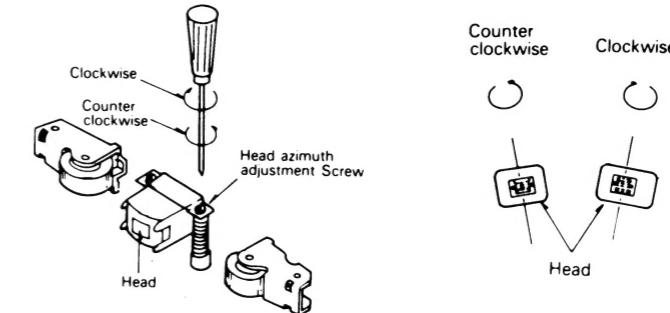

1. Clean the playback head before adjustment.
2. Prepare the test tape MTT-114
3. TREBLE, BASS & BALANCE Mechanically center position
4. Connections are shown in Fig. 2-1.

Fig. 2-

STEP	SUBJECT	INPUT SIGNAL	MEASURE OUTPUT	SETTING	ADJUSTMENT
1.	Head azimuth adjustment	MTT-114	L or R-ch SP Output Wire VTVM & Scope	Playback MTT-114	Turn the azimuth screw to obtain maximum output on both FWD and REW PLAY. (See Fig. 2-2)

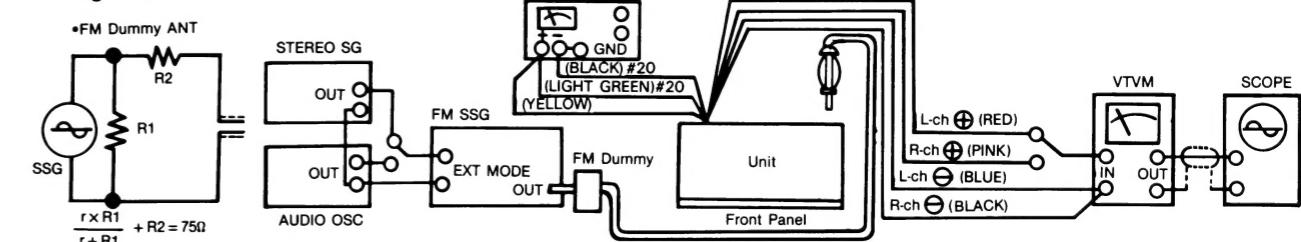

Fig. 2-2

2-2. FM Adjustment

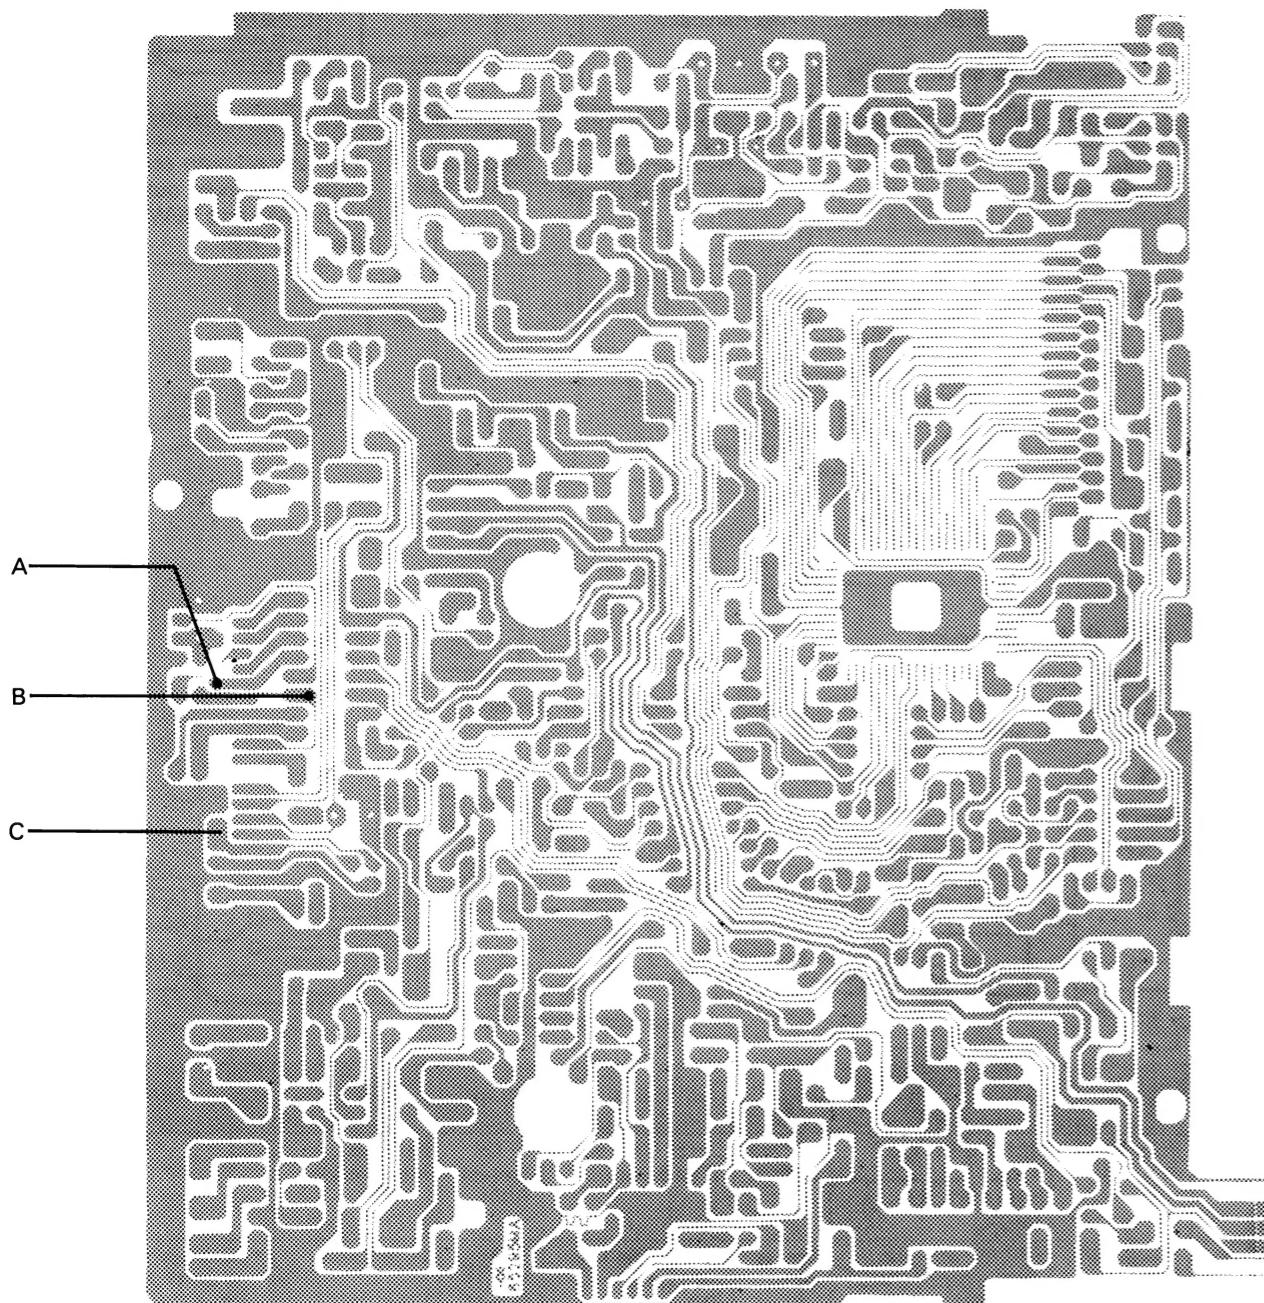

Note: 1. BAND FM
2. TREBLE BASS & TONE Mechanically center position
3. Connection are shown in Fig. 2-3

Fig. 2-3

STEP	SUBJECT	FEED SIGNAL		MEASURE OUTPUT	ADJUST	ADJUST FOR	REMARK
		FROM	TO				
1.	IF Coil Adj.	98.1 MHz ANT Input 12dB _u , 1 kHz (100% MOD., FM SSG)	ANT Jack & Ground	L-ch SP Output wire VTVM & Scope	IFT Coil Front-end, TU101	Max. Adjust. Above and Below	
2.	Discriminator Coil adj.	98.1 MHz ANT Input 60dB _u , 1KHz(100% MOD.), NO. MOD., FM SSG. 1. Band Selector

When (BAND) key is depressed, the reception band changes in sequence as shown below for each depression or for each request:

• FM1→FM2→FM3→MW1(AM1)→MW2(AM2): In case of AKF-9255

2. Scan Tuning

SCAN A momentary depression causes automatic station-to-station search.

3. Manual Tuning

A) UP, DOWN A momentary depression will tune to next channel, and continuous depression more than 0.5 second allows traversing up or down the entire band until the key is released.

4. Preset Memory

A)ME The tuning information is stored into the internal RAM by depressing ME key and then the desired memory key (M1 to M6) within 5 seconds from the time ME key was initially depressed. If any other key is depressed in this period, the ME function is canceled.

B) M1 to M6 Six favorite stations can be recalled from internal RAM for each band. When it is switched from one band to the other, it will tune to "last-tuned-to station" on that band.

Each time a station is changed, the controller provides a signal to mute the radio.

5. DIODE MATRIX DESCRIPTIONS

DISAMEMO	<p>Switch used to prohibit the auto-preset-memory function. The switch setting as follows:</p> <table border="1"> <thead> <tr> <th>DISAMEMO</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Auto-preset-memory function is enabled. Auto-preset-memory operation starts if PSCAN AMEMO key is pressed for 2-second or longer.</td> </tr> <tr> <td>1</td> <td>Auto-preset-memory function is disabled. PSCAN AMEMO key is only for preset-scan-function.</td> </tr> </tbody> </table>				DISAMEMO	Description	0	Auto-preset-memory function is enabled. Auto-preset-memory operation starts if PSCAN AMEMO key is pressed for 2-second or longer.	1	Auto-preset-memory function is disabled. PSCAN AMEMO key is only for preset-scan-function.																						
DISAMEMO	Description																															
0	Auto-preset-memory function is enabled. Auto-preset-memory operation starts if PSCAN AMEMO key is pressed for 2-second or longer.																															
1	Auto-preset-memory function is disabled. PSCAN AMEMO key is only for preset-scan-function.																															
PSCAN AMEMO	<p>Preset-memory and auto-store-memory key. Auto-store-memory function is valid when the initialization diode switch DISAMEMO is "0". Press this key to use auto-store-memory function when DISAMEMO = 0. If the key is released within 2 seconds, preset-memory-scan operation starts. If the key is pressed for more than 2 seconds, auto-store-memory operation starts. When auto-store-memory function is not used, (DISAMEM = 1), if the key is pressed, preset memory scan operates. Preset-memory-scan and auto-store-memory operate as follows.</p> <p>(1) Preset-memory-scan operation The contents of preset memories are called for 5 seconds each automatically. The preset memories' contents are called in sequence, beginning with M1 if something other than preset memory is being received when this key is pressed, or beginning with the preset memory is being received when this key is pressed, or beginning with the preset memory next to the one being received (for example, beginning with M4 if M3 is being received). This operation is described below in further detail.</p> <p>(Example) When FM1 is received. FM1 M1→M2→M3→M4→M5→M6 Something other than a preset memory is being received on the FM1 band. M3 is being received on the FM1 band.</p> <p>The operations on the MW and (MW1, MW2) and LW band are same as on the FM band.</p>																															

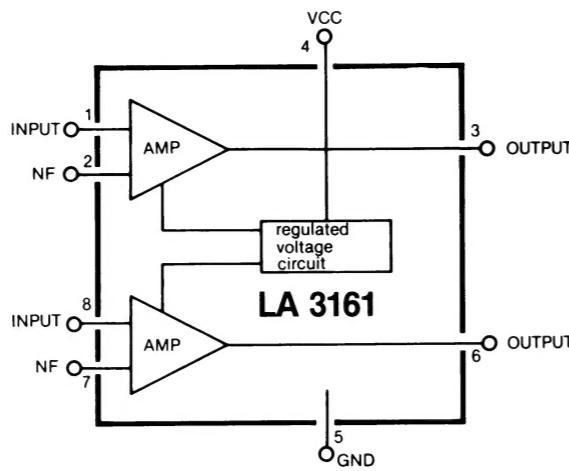

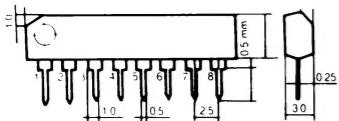

7. ALTERNATE OR TRANSISTOR SWITCHES

SYMBOL	DESCRIPTION																																																																																																																																										
TPSET (Q502)	Switch used to set the tape mode. Valid only when the CE pin is high. The tape mode can be set by turning on this switch while the CDSET switch is off. For further information, see the 2. MODE TRANSITION section.																																																																																																																																										
RDSET (Q501)	Switch used to set the radio mode. Valid only when the CD pin is high. the radio mode can be set by turning on this switch while both the CDSET and TPSET switches are off. For further information, see the 2. MODE TRANSITION section. The RDON switch (diode switch) must be set to "O" when this switch is used. [RADIO] key must not be used either.																																																																																																																																										
ST	Switch used to enable "ST" (stereo) display when in the radio mode. "ST" display on the LCD panel lights by turning on this switch.																																																																																																																																										
FF	Fast forward signal input switch when in the tape mode. This switch turns on the tape transport direction indicator (\triangleleft \triangleright) depending on the RL switch status in the following ways: <table border="1"> <thead> <tr> <th>FF</th> <th>RL</th> <th>indicator</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>\triangleleft \triangleright</td> </tr> <tr> <td>0</td> <td>1</td> <td>\triangleleft \triangleright</td> </tr> <tr> <td>1</td> <td>0</td> <td>\triangleleft \triangleright</td> </tr> <tr> <td>1</td> <td>1</td> <td>\triangleleft \triangleright</td> </tr> </tbody> </table> \triangleright : off, \blacktriangleright : on, \triangleright : flashing (2Hz) 0: OFF, 1: ON	FF	RL	indicator	0	0	\triangleleft \triangleright	0	1	\triangleleft \triangleright	1	0	\triangleleft \triangleright	1	1	\triangleleft \triangleright																																																																																																																											
FF	RL	indicator																																																																																																																																									
0	0	\triangleleft \triangleright																																																																																																																																									
0	1	\triangleleft \triangleright																																																																																																																																									
1	0	\triangleleft \triangleright																																																																																																																																									
1	1	\triangleleft \triangleright																																																																																																																																									
RL (Q504)	Tape transport direction signal input switch when in the tape mode. This switch turns on the tape transport direction indicator (\triangleleft \triangleright) depending on the FF switch status. For the indicator status, see the tape for FF switch.																																																																																																																																										
M1 (TP1) M2 (TP2) M3 (TP3) M4 M5 M6	The device, when powered on, comes up with M1 to M6 being loaded with the following frequencies to facilitate set adjustment: <table border="1"> <thead> <tr> <th rowspan="2">Area</th> <th rowspan="2">Band</th> <th colspan="2">Preset memory number</th> <th>M1</th> <th>M2</th> <th>M3</th> <th>M4</th> <th>M5</th> <th>M6</th> </tr> <tr> <th>M1</th> <th>M2</th> <th>M1</th> <th>M2</th> <th>M3</th> <th>M4</th> <th>M5</th> <th>M6</th> </tr> </thead> <tbody> <tr> <td>Europe 1</td> <td>FM1</td> <td>98.5</td> <td>87.7</td> <td>92.3</td> <td>96.3</td> <td>105.9</td> <td>98.5</td> <td></td> <td></td> </tr> <tr> <td>Europe 2</td> <td>MW1</td> <td>522</td> <td>603</td> <td>954</td> <td>1386</td> <td>522</td> <td>522</td> <td>522</td> <td></td> </tr> <tr> <td></td> <td>MW2</td> <td>522</td> <td>621</td> <td>1098</td> <td>1530</td> <td>522</td> <td>522</td> <td>522</td> <td></td> </tr> <tr> <td></td> <td>LW</td> <td>144</td> <td>155</td> <td>208</td> <td>256</td> <td>144</td> <td>144</td> <td>144</td> <td></td> </tr> <tr> <td>U.S.A. 1, U.S.A. 2</td> <td>FM1</td> <td>87.5</td> <td>87.9</td> <td>98.1</td> <td>105.1</td> <td>87.5</td> <td>87.5</td> <td>87.5</td> <td></td> </tr> <tr> <td>U.S.A. 3</td> <td>MW1</td> <td>530</td> <td>620</td> <td>1010</td> <td>1490</td> <td>530</td> <td>530</td> <td>530</td> <td></td> </tr> <tr> <td>Australia, and Near and Middle East</td> <td>FM1</td> <td>87.5</td> <td>87.9</td> <td>97.1</td> <td>105.1</td> <td>87.5</td> <td>87.5</td> <td>87.5</td> <td></td> </tr> <tr> <td></td> <td>MW1</td> <td>531</td> <td>612</td> <td>963</td> <td>1395</td> <td>531</td> <td>531</td> <td>531</td> <td></td> </tr> <tr> <td>Japan</td> <td>FM1</td> <td>76.0</td> <td>76.4</td> <td>85.6</td> <td>76.0</td> <td>76.0</td> <td>76.0</td> <td>76.0</td> <td></td> </tr> <tr> <td></td> <td>MW1</td> <td>522</td> <td>603</td> <td>954</td> <td>1386</td> <td>522</td> <td>522</td> <td>522</td> <td></td> </tr> <tr> <td>Central South America</td> <td>FM1</td> <td>87.5</td> <td>87.9</td> <td>97.1</td> <td>105.1</td> <td>87.5</td> <td>87.5</td> <td>87.5</td> <td></td> </tr> <tr> <td></td> <td>MW1</td> <td>520</td> <td>565</td> <td>760</td> <td>1000</td> <td>1400</td> <td>1400</td> <td>520</td> <td></td> </tr> </tbody> </table> M1 to M6 on the FM2, and VF bands, and MW2 band in except Europe 1 and Europe 2 are loaded with the lowest frequencies in effect in each area. • In the tape mode The initialization diode switches, ENTPK, KAMS, KMTL enable the M1 (TP1) to M6 keys to function as tape function keys. For the keys that can be shared, see the diode matrix description. For the key operations, see the description of [AMS], [NR], and [MEL] keys.
